Laurence Shatkin : 150 Best Recession-Proof Jobs (Jist's Best Jobs) before purchasing it in order to gage whether or not it would be worth my time, and all praised 150 Best Recession-Proof Jobs (Jist's Best Jobs):

0 of 0 people found the following review helpful. Book was ok By B. LaBarre Book wasn't bad. It seemed a little dated and there were a few flaws in the information. 2 of 2 people found the following review helpful. Some useful information, but a pain to read! By Darren Thornton I learned about this book from columnist Richard Prachter. He regularly recommends various business titles. Several of his recommendations were very good. This one had a lot of potential, but fell short. Jobs can be hard to find, regardless of the current state of the economy. Some people get jobs fairly easy, but don't keep them very long. Who else has had more trouble just getting the job? Once you have it, sometimes you stay at the party too long. Then here we go again! My main beefs with this book are regarding the format. There is a lot of repetition. Eliminating most of it could have cut this book by at least 100 pages. After awhile, I could almost recite the job duties of many similar positions. Why not just lump those categories together? Doing double columns for the job descriptions made reading this book an even bigger chore. Another problem is that some

information is constantly changing. This book could get updated practically on a daily basis. We've also seen the problem of people training for a position that's hot now. In a few years, we could have too many available candidates. It's almost certain that this book will be revised in the future. Why not spend less time on those overlapping surveys? Those could have been put as sidebars. There have been countless books on finding a job. Their effectiveness is a very mixed bag. I would like some subjects get more attention. Most books focus entirely on resumes. Some jobs require applications. What if you can't avoid Human Resources? Why not make blind ads illegal? We're told to find out stuff about a company. Yet we don't even know its name. Tell us more about legitimate work-at-home opportunities. Sometimes I've thought about writing a book on how NOT to get a job. That one would be 100% effective. 0 of 0 people found the following review helpful. A Great Tool for "Recession-Era" Career Counseling By Lady Di I am a college counselor, career counselor, and learning disabilities specialist at a "4-year prep" community college. I have found this book to be very user-friendly and an excellent resource as I counsel and advise students, especially when the present job market is so discouraging. Many other counselors in my department are now borrowing this book and/or buying a copy themselves. This book specifically highlights those jobs that are the most promising during our Great Recession (ie. since 2008 to present), which is also vital information for students who are trying to determine a college major for a future job. This book is the best I have found for up-to-date info to guide students in these rough economic times. In addition, the book is appropriately researched and linked into the annual government job "outlook" reports (which are referenced as footnotes, etc.). [Note: this does not mean a person can skip doing the important and necessary career research for their own local market and personal circumstances - no book can do this. This book is a great first step in recession-era career exploration.] In this book, the same 150 "best" jobs are listed in many different rankings (per your focus) such as: by salary, by education-required, by most openings, by # of positions, by geographic location, by Holland's career codes, etc. I especially like how the author has at the back of the book, a complete write up of each of the 150 jobs (in alphabetical order) giving more details on the jobs, such as typical job descriptions, skills and education required, most-likely employers, least-likely employers, geographic location with the most openings, etc. Both students and counselors really like the concise but complete, easy-to-understand, concrete info that can be discovered within just 15 minutes! Very well organized, great Table of Contents, plus detailed Index.

This unveils the most secure and high-paying jobs in good times and bad times. In just two steps, this book helps readers focus their career options and learn more about secure jobs that interest them. First, reader explore 75 lists that rank the best recession-proof jobs according to pay, growth, openings, education level, personality type and more. Next, readers review descriptions of the jobs that appeal to them. These detailed descriptions include information about a job's pay, growth, openings, tasks, skills needed and much more.

"In this book, the authors deliver an immensely informative guide to find a job that just may help you keep paying the bills in good times and bad." --Michelle Singletary, Personal finance columnist, The Washington Post
About the Author
The Editors at JIST have dedicated their careers to helping people by making complicated occupational, job search, and education information understandable, accessible, useful, and beneficial to readers at all levels. Together, they have more than 80 years of experience in writing, editing, teaching, training, supervision, libraries, and retail sales. Shakin, Ph.D., is a Senior Product Developer at JIST. He has extensive work experience in developing career information systems and is the current president of the Association of Computer-based Systems for Career Information. Laurence is sought after by the media for his expertise on occupations and career trends, and he speaks frequently at national conferences and gives Webinars.
